SUMMARY

Finance and operations professional who builds the systems the work runs on, using AI as the development stack. Five years across financial services, telecom, and startups. Currently own AP, AR, commissions, and the monthly close for two telecom companies, and wrote most of the automation that handles it now, roughly 30 hours of manual filing and data entry a month. Ships production software solo: LLM integrations, agent runtimes, and full-stack internal tools.

EXPERIENCE

Financial Operations Analyst, Full Time

06/2026 to Present

Interactive Telecom Solutions & Platform Technologies | New Jersey

- Own the books for two affiliated telecom companies: accounts payable and receivable, QuickBooks entry, reconciliation, and the monthly close.
- Reconcile carrier and agent commissions across a multi-carrier book, checking what carriers actually paid against contracted rates and working out what each agent is owed. First call when a bill or a commission looks wrong.
- Built the automation that now runs accounts payable. Invoices and carrier statements get pulled in, renamed, filed, and converted into IIF files that import straight into QuickBooks, taking roughly 30 hours of filing and data entry out of every month.
- Wrote a tool that compares each month's carrier statements against the prior month so missing, changed, and underpaid lines get caught. Doing that by hand at this volume was never realistic.
- Built the internal platform the rest of it runs on, plus FCC Form 499-Q reporting pulled from billing data, revenue and margin tracking by carrier, and utilities for credential management and document search. Built solo, with AI coding tools as the development stack.

Savings Analyst & Sales Engineer, Full Time

02/2024 to 10/2025

Grapevine | New York City

- Built the savings models and customer reports the sales team ran on, combining advanced Excel work with Figma dashboards and consistently showing 40%+ average cost savings.
- Automated that reporting with macros, scripts, AI-assisted tooling, and email triggers, cutting manual analysis and reporting by 80%+.
- Worked through tens of thousands of product groups to find substitutions, generating 20 to 85% savings with annual client impact from thousands to millions.
- Ran fidelity checks, cleared 50+ backorders a week, presented results to senior stakeholders, and helped onboard new clients and vendors.

Financial Data Analyst, Surveillance & Threat Detection

04/2023 to 02/2024

Bloomberg LP | Remote

- Pulled apart large financial datasets to surface metrics and outlier trends feeding machine learning surveillance models.
- Evaluated derivatives and trade activity, including options, swaps, and forwards, to build out the validated database behind AI trade assessment.
- Tagged and verified surveillance-relevant data inside client text alongside senior analysts, which measurably improved model accuracy and target detection.

Operations & Marketing Coordinator, Part Time

07/2023 to 06/2026

Reflect Medical & Cosmetic Center | Hawthorne, NJ

- Ran the financial side in QuickBooks: transaction entry, reconciliation, expense tracking, and purchase orders.
- Managed supply inventory and vendor relationships, and produced marketing materials and social content using AI tools and Canva.

Investment Banking Intern

02/2022 to 02/2023

Cambridge Wilkinson | New York City

- Researched middle-market companies for debt and equity raises from \$25MM to \$1B, and built the target lists of executive contacts and financial metrics behind live deals.
- Sat in on client and investor meetings presenting financing options to middle-market firms and institutional investors.

PROJECTS & FREELANCE

- **Oikos:** A live economy of AI agents that must earn more than they burn or die. Agents get wallets and skills, pay rent as a token burn, and earn by completing bounties. Solidity contracts, an agent runtime on the Anthropic SDK Tool Runner, a reorg-tolerant chain indexer, and a live front end.
- **FieldSense:** NFL projection engine on free public data. Every projection is a full probability distribution rather than a point estimate, so any over/under line can be priced. Python, FastAPI, PostgreSQL, Monte Carlo.
- **Splash Signal:** Real-time crypto intelligence platform. Live on-chain token feeds, AI narrative scoring, whale and dev-wallet tracking, and an instant Telegram alert bot. TypeScript, Node, WebSockets, LLM APIs.
- **Wake Rush:** Server-authoritative multiplayer arcade racer for up to 20 players, shipped as a web app and a Telegram Mini App on one backend.
- **Web3 Project Advisor:** Advised early-stage projects on utility design, token launches, and go-to-market; several reached \$1M+ market cap.
- **Computer Technician:** Built, configured, and sold 50+ custom desktops through eBay; hardware and software repair, upgrades, and tuning.

SKILLS

- **AI & LLM Engineering:** Production LLM integrations (Claude, GPT, Gemini), agent tooling and the Anthropic SDK Tool Runner, prompt and workflow design, AI-assisted development from spec to ship
- **Building:** JavaScript/React, Python, SQL, Solidity; FastAPI, NestJS, Next.js, PostgreSQL; Git/GitHub, Vercel, Railway
- **Workflow & Automation:** Process design, document intake and filing, IIF journal generation and QuickBooks imports, automated statement comparison and exception reporting
- **Finance & Accounting:** AP/AR, monthly close, reconciliation, carrier and agent commission accounting, FCC Form 499-Q revenue reporting, QuickBooks
- **Data & Analysis:** Advanced Excel and Google Sheets, variance and margin analysis, Metabase, Bloomberg Terminal, Figma

EDUCATION & CERTIFICATIONS

B.S. Finance, Concentration in Business Analytics

12/2022

Rutgers University | New Brunswick, NJ

Dean's List | GPA: 3.58

SQL for Data Science

12/2025

UC Davis (Completed)
