Work Experience

Financial Operations Analyst – Full Time Interactive Telecom Solutions & Platform Technologies	06/2026 to Current New Jersey
- Own the books for two affiliated telecom companies: accounts payable and receivable, QuickBooks entry, reconciliation, and the monthly close. - Reconcile carrier and agent commissions across a multi-carrier book, checking what carriers actually paid against contracted rates and working out what each agent is owed. First call when a bill or a commission looks wrong. - Built the automation that now runs accounts payable. Invoices and carrier statements get pulled in, renamed, filed, and converted into IIF files that import straight into QuickBooks, taking roughly 30 hours of filing and data entry out of every month. - Wrote a tool that compares each month's carrier statements against the prior month so missing, changed, and underpaid lines get caught. Doing that by hand at this volume was never realistic. - Built the internal platform the rest of it runs on, plus FCC Form 499-Q reporting pulled straight from billing data, recurring revenue and margin tracking by carrier, and smaller utilities for credential management and document search.	
Savings Analyst and Sales Engineer – Full Time Grapevine	02/2024 to 10/2025 New York City
- Built the savings models and customer reports the sales team ran on, combining advanced Excel work with Figma dashboards and consistently showing 40%+ average cost savings. - Automated that reporting with macros, scripts, and email triggers, cutting manual analysis and reporting by 80%+. - Worked through tens of thousands of product groups to find substitutions, generating 20 to 85% savings and annual client impact from tens of thousands to millions. - Ran fidelity checks, cleared 50+ backorders a week, and helped onboard new clients and vendors.	
Financial Data Analyst – IB/ASR/Surveillance/Threat Detection Bloomberg LP	04/2023 to 02/2024 Remote
- Pulled apart large financial datasets to surface metrics and outlier trends feeding machine learning surveillance models. - Evaluated derivatives and trade activity, including options, swaps, and forwards, to build out the validated database behind AI trade assessment. - Tagged and verified surveillance-relevant data inside client text alongside senior analysts, which measurably improved model accuracy and target detection.	
Operations & Marketing Coordinator – Part Time Reflect Medical & Cosmetic Center	07/2023 to 06/2026 Hawthorne, NJ
- Ran the financial side in QuickBooks: transaction entry, reconciliation, expense tracking, and purchase orders. - Managed supply inventory and vendor relationships, and designed the practice's marketing materials and social content in Canva.	
Investment Banking Intern Cambridge Wilkinson	02/2022 to 02/2023 New York City
- Researched middle-market companies for debt and equity raises from \$25MM to \$1B, and built the target lists of executive contacts and financial metrics behind live deals. - Sat in on client and investor meetings presenting financing options to middle-market firms and institutional investors.
